

Read Me Notes: Grainy Backdrop

October 2006

Xtra Text Boxes

Three of the templates include two columns of text. The first column, or the column on the left side of the page, is the text content that you input while in the Content window. The second column of text is built using xtra text boxes in the Layout window. This means you will need to go into the Layout window and input your own text into the pre-made text boxes.

Slideshow Only template

This template has the masthead positioned beneath the slideshow. If your caption text exceeds the set height of the slideshow area, it will run into the masthead (the masthead does not automatically adjust its position). This means you will need to go into the Layout window and simply move your masthead down to the desired position on the page - the footer and page background will automatically adjust when you move the masthead position.
