

Read Me Notes: Rounded Thumbnails

October 2006

Thumbnail Display

The first two templates limit the thumbnail display to two rows. If you want to increase this number, simply go into the Layout window, select the *Photos* tab, and adjust the number of rows. The content below the thumbnail display will automatically adjust, with the exception of the slideshow picture on the *Home Page* template - you will need to move the slideshow picture down yourself.

Contact Page template

Contact forms utilize php code and can only be used with web hosts that support php on their servers. If you are unsure of whether or not your web server space has the required php support, contact your web host and ask them.

The Contact Page template contains a form that will require you to enter the email address of where you want the form info to be submitted - the *mailit.php* file contains the destination email address. The files for the contact form are included with the theme's downloadable zip file, contained in a folder called "contactform." From the contactform folder, select the mailit.php file. Open this php file (using a text editor such as "TextEdit"), enter the correct email address (in place of 'someone@domain.com'), save and close the file. Drag and drop the new php file into the "contactform" folder of ShutterBug's *Files* interface (under the Content window). This will replace the old file with your new one. Go to the Preview window, and hit the Send button to upload the changed php file to your server. Be sure to test your form out to make sure the info is being submitted to the correct email address.
